

Brad Guillén García

Senior Software Engineer

📍 Costa Rica | 📞 +506 6201-1840 | ✉ bradguillen15@gmail.com | 🔗 LinkedIn | 📄 GitHub | 🌐 bradguillen.com

PROFESSIONAL SUMMARY

Senior Software Engineer with ~10 years designing and delivering production web applications across frontend and backend. Deep expertise building and maintaining large production React/TypeScript applications, with professional backend experience in Java, Spring Boot, Node.js, AWS, and modern cloud architectures. Track record leading cross-team API migrations, repository consolidation, and performance work on an enterprise real estate platform (~40 micro frontends in production). Former Team Lead for a four-person frontend squad, hands-on from design through deployment.

TECHNICAL PHILOSOPHY

I specialize in **simplifying complex systems** by reducing boilerplate, isolating change behind clear abstractions, and optimizing for long-term maintainability. I favor incremental evolution over risky rewrites and use AI to accelerate development without compromising quality.

SELECTED PROJECTS

Free Slot – production full-stack time & activity tracker [↗ free-slot-blush.vercel.app](#)

React · TypeScript · Supabase · React Query · Playwright · Sentry · CI/CD on Vercel

- Designed and built a production app end-to-end on Supabase (managed auth and Postgres).
- Abstracted Supabase behind services and hooks so the UI stays vendor-agnostic and the backend remains swappable.
- Introduced an anonymous-first flow: activity persists in localStorage and migrates to Supabase on signup without data loss.
- Used React Query for declarative server state and cache consistency across the app.
- Shared a local-first dev environment with Playwright E2E tests for coverage against real auth and data paths.
- Added production observability with Sentry and CI/CD on Vercel.
- Created a RAG recommendation feature that feeds activity data to an LLM to suggest habits the user wants to build.

TECHNICAL SKILLS

Frontend: React, Redux, React Query, Next.js, Micro Frontends (Module Federation), Webpack, Tailwind CSS, Web Accessibility (WCAG, ARIA, a11y), SEO

Backend: Node.js, Express, REST APIs, GraphQL, WebSockets, ASP.NET (MVC), Spring Boot, Hibernate, AWS Lambda (serverless)

Cloud & DevOps: AWS (Lambda, API Gateway, EC2, S3, IAM, CloudFront), Firebase, Vercel, GitHub Actions, Jenkins, Harness, Spinnaker, Docker

Testing: Playwright, Jest, React Testing Library, Vitest, JUnit, Mockito

Databases: PostgreSQL, MySQL, MongoDB, Supabase

Languages: TypeScript, JavaScript, Java, C#, Python, SQL

AI Engineering: LLM integration, RAG applications, MCP (Model Context Protocol) servers, prompt & context engineering, AI-assisted development (Cursor, Claude Code, Copilot, CodeRabbit)

PROFESSIONAL EXPERIENCE

Keller Williams – Senior Software Engineer

Nov 2020 – Apr 2026 • 5.5 yrs

One of two frontend engineers on Keller Williams' enterprise real estate platform (~40 micro frontends in production); owned 3 production apps (user, admin, shared) and collaborated cross-team across multiple projects.

- Single-handedly migrated my application off another team's API V1 to V2 (a full response-format redesign), building a transformation/mapping layer that normalized V2 into the shape consumers already expected so I could migrate every call site without a risky big-bang rewrite.

- Migrated server state from Redux to React Query, cutting state-management boilerplate ~40% and simplifying onboarding for new feature work.
- Diagnosed rendering bottlenecks through production debugging and introduced lazy loading, cutting dashboard load time ~35%+.
- Consolidated three repositories into two, reducing deployment steps, pipeline maintenance, and onboarding cost.
- Designed a configuration-driven banner system that let Product manage banners without engineering cycles, eliminating a recurring class of sprint work.
- Built reusable, accessible React components to WCAG/ARIA standards (keyboard navigation and screen-reader support) in the shared component library.
- Contributed to micro-frontend architecture and maintained CI/CD across GitHub Actions, Harness, and Spinnaker.
- Used Datadog for production observability – dashboards, monitors, and alerts – across apps serving ~60,000 users, helping catch regressions and triage incidents.

Advison Development – Lead Web Developer (promoted from Senior Web Developer)

Nov 2017 – Nov 2020 • 3 yrs

Promoted to Lead Web Developer (2020) after ~2 years as Senior Web Developer; led a frontend team of 4 as Scrum Master while delivering full-stack.

- As Lead Web Developer, led a frontend team of 4 and ran sprint ceremonies as Scrum Master while staying hands-on across the stack.
- Set team coding standards and reusable patterns, reviewed designs and architecture, mentored developers, and interviewed and helped hire.
- Led an AWS Lambda integration (API Gateway, EC2, IAM, S3) that transformed and cached internal API data into a WordPress-friendly API for the CMS.
- Built and consumed RESTful APIs in Node.js/Express and GraphQL, coordinating with backend teams on contract definitions.
- Implemented real-time features with WebSockets for low-latency live updates on the frontend.
- Owned on-page SEO for a sports-betting marketing site – semantic, performant React pages (live odds/lines linking out to sportsbooks) and content-driven WordPress pages – to maximize organic search ranking.
- Drove a custom React CMS to WordPress migration and rebuilt a contractor-abandoned critical page before deadline.

First Factory – Software Engineer

May 2016 – Nov 2017 • 1.5 yrs

- Architected a Java REST API from scratch (Hibernate, Jersey; JUnit/Mockito tests; Selenium QA automation) for a US client, with on-site collaboration and direct stakeholder reporting.
- Created a Yeoman generator scaffolding full-stack templates for Java (Spring Boot) or Node.js, plus a Google Sheets reporting add-on.
- Built a C# clinic-management application for internal workflows and contributed to a Python/Flask project.

FPT Latin America – Software Developer Intern

Oct 2014 – Dec 2014 • 3 mos

- Built a SharePoint application from scratch (JavaScript, C#, SQL) to manage internal operational workflows; delivered on schedule and ran end-user training.

EDUCATION & LANGUAGES

Boot.dev – Back-end Developer Path (in progress): Python, TypeScript, SQL, Docker, CI/CD, AWS, RAG

Computer Engineering – ULACIT (2015, ~90% completed)

Middle Technician in Software Development – Colegio Técnico Carlos Luis Fallas (2012–2014)

Languages: Spanish (Native) • English (C1)
